## RESEARCH INTERESTS

My interests are in natural language processing and deep learning. I am particularly interested in how we can build a robust and scalable AI system that can leverage diverse skills (e.g., retrieval, logical reasoning, and numerical reasoning) to aggregate possibly-heterogeneous information and answer natural language questions precisely regardless of their complexity. My recent work focused on (i) comprehensive exploitation of large-scale textual knowledge for multi-answer question answering [2], (ii) (weakly-supervised) neuro-symbolic models for complex discrete reasoning [1][4][6], (iii) robust classification and text matching (e.g., paraphrase detection and natural language inference) [3].
