RESEARCH INTERESTS

My interests are in natural language processing and deep learning. I am particularly interested in how we can build a robust and scalable AI system that can leverage diverse skills (e.g., tool use and reasoning) to aggregate possibly-heterogeneous information and answer natural language questions precisely regardless of their complexity.

My research focused on **faithful reasoning**, recently **in the context of utilizing large language models**. My work spans across (i) knowledge-grounded generation [7][3] (ii) tool-augmented reasoning [1][8][2][5] (iii) robust natural language understanding [4].

Research Intern (Supervisors: Yeyun Gong, Nan Duan, Yelong Shen, Weizhu Chen)

- [Knowledge-Grounded Generation]: ITER-RETGEN [7], which synergizes retrieval and generation iteratively, is a strong method that enables large language models to leverage intrinsic and extrinsic knowledge flexibly;

- [Tool-Augmented Reasoning]: (i) **Synthetic Prompting** [1] elicits better reasoning in large language models with model-synthesized chain-of-thought demonstrations, achieving a new state-of-the-art on numerical reasoning, symbolic reasoning, and algorithmic reasoning tasks; (ii) **CRITIC** [8] teaches large language models to correct themselves via interactions with tools.

- [Knowledge-Grounded Generation]: **RECTIFY** [3], a Recall-then-Verify framework that exploits retrieved knowledge comprehensively, tops AmbigNQ;

- [Tool-Augmented Reasoning]: (i) **CANTOR** [2], the first non-autoregressive numerical reasoner, outperforms $174\times$ larger PaLM 62B on grade school math; (ii) **MIMAX** [5], a weakly-supervised training algorithm that is applicable to various neuro-symbolic reasoning models;

- [Robust Natural Language Understanding]: **AdvExpander** [4], a novel insertion based textual adversarial attack, reveals new robustness issues.

- [Text Generation and Evaluation]: (i) **PHVM** [6], a data-to-text generation model; (ii) **CoTK** [9], a toolkit for fair evaluation.
